

DNA

BJJ Club Management App — Partner Briefing

Prepared June 2026

What We're Building

DNA is a mobile gym management app built specifically for BJJ clubs. It runs on a coach's phone and handles the day-to-day admin that currently lives in spreadsheets, group chats, and paper — student rosters, attendance tracking, belt stripe progression, and digital waivers.

The app is coach-facing only. Students interact with it in one way: scanning a QR code to sign their annual waiver.

Where We Are Now

Phase 1 — Demo (Complete)

We built a fully functional mobile demo of the app. It looks and behaves like a real native app but runs entirely in the browser with no backend. Every feature is wired up visually:

- Student roster with belt level and stripe bar
- Per-student attendance tracking with 6-month history
- Belt stripe awarding with date logging (4 stripes per belt)
- Digital waiver signing via QR code
- Waiver status on each student profile (signed / expiring / missing)

Phase 2 — Real Backend (In Progress)

We are now replacing the demo's local browser storage with a real database and API. Progress so far:

- GitHub repo created for the backend (dna-bjj-api)
 - Supabase project set up — database, auth, and file storage in one place
 - All core database tables created (students, stripes, attendance, waivers)
 - Authentication setup is underway (step 3 of 5)
-

Tech Stack

Frontend	React, Tailwind CSS, React Router
Backend	Node.js + Express
Database	Supabase (PostgreSQL)
Auth	Supabase Auth — email/password for coaches
File Storage	Supabase Storage (for waiver PDFs)
Hosting	Railway or Render (planned)
Repo	GitHub (private)

Core Features

Student Roster

Coaches manage a full roster of students. Each student has a profile with name, email, belt level, join date, waiver status, and their complete attendance and stripe history.

Belt Stripe Tracking

In BJJ, each belt has 4 stripes before promotion to the next belt. Coaches tap a stripe to award it and log the date. The stripe bar appears directly under the student's name throughout the app — 4 dark segments, each lighting up white when earned.

Attendance

Coaches take attendance per session with a single tap. Each student's profile shows a 6-month rolling summary. Months with zero attendance are flagged so coaches can follow up.

Digital Waivers

Coaches display a QR code on their phone. Students scan it, read the waiver, and sign digitally. The waiver auto-attaches to the student's profile by email match. All waivers expire January 1st each year and must be re-signed annually.

What's Next

- Finish auth (coaches only — no student accounts needed)
 - Build and test all API routes (students, attendance, waivers, stripes)
 - Set up Supabase Storage for waiver PDF uploads
 - Deploy API to Railway / Render
 - Wire the demo frontend to the live backend
